Is your computer safe from Internet delivered threats such as viruses, spyware, and worms?

According to Consumer Report's 2007 State of the Net survey, 1 in 2 people experienced high levels of spam; 1 in 5 had a major, often costly problem due to viruses; 1 in 11 had a costly problem due to spyware; and 1 in 81 lost money due to phishing. Total damages to consumers in 2007 alone are estimated at $7.1 billion. In fact, in a six-month time period in 2007, infections prompted 850,000 U.S. households to replace their computers, according to the Consumer Reports survey.

Why? Software solutions that come in a box or that are downloaded free off the Internet require users to install, maintain, and update them. National studies show that the majority of Internet users do not install these programs correctly or keep them updated.

Now there's help with SecureIT Plus available from Go Tech.

In response to customer feedback, and after extensive research and testing, we are pleased to introduce a new service that provides superior protection of your computer and your privacy. SecureIT Plus is a fully automated and guaranteed computer protection service. It is a single service that is made up of a suite of technologies that are fully managed and supported to protect your computer.

Stop wasting time worrying about what type of protection you need, what product or products you should install, who is going to install them, who is going to maintain and update them, and more importantly who you can call if you have any questions. Even if you think your system is protected from viruses, spyware, and other threats, you need to take a close look at this important tool.

For $6/month you get all of the services listed below in one completely automated package.

> **Firewall Protection**
> SecureIT Plus firewall protection offers the ability to allow or deny traffic through specific programs
>
> **Managed Virus Protection**
> SecureIT Plus incorporates anti-virus protection from ClamAV; it will check for updates on an hourly basis to make sure the computer is as protected as possible.
>
> **Spyware Detection, Removal, and Pop-up Blocker**
> Spyware is a general term for a program that secretly monitors your actions. SecureIT Plus uses a three phase approach to protect your computer from spyware. Technology is in place to stop spyware from infiltrating your computer, to detect in real-time any malicious activity. In addition, SecureIT Plus has a fully customizable Internet Explorer pop-up blocker to minimize those annoying pop-up ads and displays, saving both time and bandwidth.

System and Disk Maintenance

System and disk maintenance is often one of the most overlooked tasks and is a leading cause of poor performance and instability issues. SecureIT Plus uses Diskeeper Professional to provide ongoing maintenance by optimizing file storage and disk defragmentation for faster PC performance.

Microsoft Patch Management

One particularly important element of maintaining a secure and reliable computer is staying up to date on critical software patches. SecureIT Plus patch management provides a daily assessment of missing critical patches for Microsoft Operating Systems and automatically applies them after rigorous testing to ensure continued protection.

Monthly E-mail Summary & Online Reporting

To increase the value of the service, SecureIT Plus has developed a unique online reporting application that allows you to view vital computer protection statistics throughout the life of your subscription. These detailed reports show you information such as the number of viruses your computer has been protected from and the number of updates that have been applied. For small business environments and homes with multiple computers, these reports will also show you a roll-up of all your computers so you can see in a single view the protection that you have been provided.

All of this is included in the price of SecureIT Plus and is kept-up-to-date automatically—you'll never have to worry about Internet security again. If your time is valuable, or you are not a computer security expert, this service is for you.

By signing below you authorize Preston Telephone Company to bill you a $15 set up fee and $6 / month for SecureIT Plus service.
